## QUICK REVIEW

- ❖ Commonly used memory units are: Kilo byte (KB), Mega byte (MB), Giga byte (GB), Tera byte (TB).
- ❖ Computer system has two types of memories: Primary memory and Secondary memory.
- ❖ Primary memory is computer's own memory. It is also known as Main memory or Internal Memory.
- ❖ Primary memory is of two types: RAM and ROM.
- ❖ RAM stands for Random Access Memory. It is the only memory that is in direct contact with CPU.
- ❖ RAM is a volatile and read/write memory.
- ❖ ROM stands for Read Only Memory. It contains essential software called firmware.
- ❖ ROM is non-volatile but read only memory.
- ❖ Secondary memory is additional memory that can be attached to computer on demand.
- ❖ Secondary memory is non-volatile memory. It is cheaper but slower than primary memory.
- ❖ Hard disk is a pack of circular disk coated with magnetized material. It is generally non-portable but now a days portable hard disks are also available.
- ❖ CD stands for compact disk. It is cheap, portable and 650MB-750 MB storage capacity secondary memory.
- ❖ DVD stands for Digital Versatile Disk. It is cheap, portable and 4.7 GB-17.08 GB storage capacity secondary memory.
- ❖ Pen drive is a compact, portable secondary memory with storage capacity 1GB-64 GB.
- ❖ Blu-ray is a optical storage secondary memory with 25-50 GB storage capacity.
